change throughout the transition. 7

approach to communicating change processes throughout the change.

Several reasons constitute a need for change leadership adjustments and the implementation of change management drivers. The organizational rapid digital transformation across the industry, new products and new processes. However, these changes in workflows, presenting a need for effective change management.

Successful transformational change management involves implementing change throughout the organization. Change management strategy can help stakeholders more than not employing such a strategy. By actively involving them in the workflow, business managers should establish the benefits of change through a change management plan.

How does change management work?

Change management should be a thought-crafted process to potential improvements. How change leadership and change management varies in size, need and scope.

For example, employees who lack experience can benefit from a tailored approach. Employees who have experience can serve as mentors to those who serve on the [HR team](#), can serve on the management team. They can offer insightful feedback to employees.

Successful change management is a cumulative process. It is a success in understanding the change initiative, supporting a positive [employee experience](#), gathering feedback and continuously communicating. Ultimately, it is innovative, creative and collaborative. It leads to the most impactful change management outcomes.

Stakeholders in the change management process

Stakeholders can vary depending on the size of the change. For example, if you are changing a process, you may need to involve a small group of people. If you are changing a large system, you may need to involve a large group of people.

offer your customers, then your customers are changing an internal technology tool, you need to engage your stakeholders.

To determine the stakeholders necessary for a change, first define the scope of change. Next, determine the current processes. Engage those stakeholders who might find that there are more key stakeholders important to be flexible with adjusting your stages, the change management strategy must be flexible.

Common stakeholders in change management include middle managers, front-line employees, developers, experts (SMEs) and potentially, customers. In change management, consider asking these questions:

- Who leads the business unit undergoing change?
- Who owns the process undergoing change?
- Who are the people sponsoring change?
- Who are the people running change?
- Who are the people most affected day-to-day?

Commonly taught change management models

Psychologists and change leaders have developed various change management models:

Bridges' Transition Model

Developed by change consultant [William Bridges](#), this model describes people's reactions to change. Critical stakeholders must be engaged in change to the 3 stages of grief. However, Bridges' model has 3 stages:

- Endings: The discontinuation of old processes
- Neutral zone: The uncertainty and confusion
- New beginnings: The acceptance of new processes

IT Infrastructure Library

Axelos, owned by a joint venture between C the [IT Infrastructure Library \(ITIL\)](#). The framework focuses on [operations](#) and infrastructure. The goal is to achieve incident-free IT service implementation process.

Over the years, ITIL has enhanced and expanded. The current ITIL framework has 4 versions, the latest being ITIL v4. Implementation of proper [DevOps](#), [automation](#) processes.¹ Created to aid in modern-day digital transformation, the Industrial Revolution prompted ITIL v4.

Kotter's 8-step process

John Kotter, a Harvard professor, created his 8-step process for leading change.² He collected the common traits of successful change leaders and used them to develop an 8-step process.

1. Creating a sense of urgency for change.
2. Building a guiding coalition.
3. Forming a strategic vision and initiatives
4. Enlisting a volunteer army.
5. Enabling action by removing barriers.
6. Generating short-term wins.
7. Sustaining acceleration.
8. Instituting change.

Lewin's change management

Psychologist Kurt Lewin developed the "unfreezing, changing, and refreezing" model in the 1940s.³ The metaphor implies that the status quo is like ice until it shatters. However, transforming an organization is like melting the ice, pouring the water into a new mold, and refreezing it. Lewin drew this comparison for change management. Introducing change in stages can help an organization gain buy-in and a smoother change process.

McKinsey 7-S

In the late 1970s, McKinsey consultants Thomas A. Stewart and John P. McGovern wrote a book called *In Search of Excellence*. The book introduced a framework to map out the interrelated factors that determine an organization's ability to change. Around 30 years later, this framework was refined into the McKinsey 7S Framework. The intersection of the elements is what determines the culture or institution. Listed in no particular order, the 7S Framework includes:

- Shared values
- Skills
- Staff
- Strategy
- Structure
- Style
- Systems

Prosci methodology

The Prosci methodology, developed by the Prosci Research Institute, examines how people react to change. The methodology consists of three main components: the Prosci Change Triangle (PCT), the Prosci Change Model (PCM), and the Prosci 3-Phase Process.

PCT Model

The PCT Model (Prosci Change Triangle) is a framework for change management. It consists of three main components: Sponsorship, project management and change management framework. This model puts success at the center of the triangle, which is supported by the three components in the overall Prosci Methodology.

ADKAR Model

The ADKAR model addresses one of the most common challenges faced by the stakeholders. The framework is an acronym for the five right strategies:

- Awareness of the need for change.
- Desire to participate and support the change.
- Knowledge of how to change.
- Ability to implement desired skills and behaviors.
- Reinforcement to sustain change.

The Prosci 3-Phase Process

A 3-phase process that has a structured but the Prosci Methodology are to prepare an outcomes.⁵
